EDUCATION

Vellore Institute of Technology, AP

2021-2025

Bachelor of Technology in Computer Science and Engineering (AI & ML)

Narayana Junior College, Hyderabad

2019-2021

Telangana State Board of Intermediate Education

Scholars Academy, Hyderabad

2018-2019

Central Board of Secondary Education

COURSEWORK / SKILLS

- Artificial Intelligence
- Reinforcement learning
- Data Structures & Algorithms
- Marketing Management
- Machine Learning
- Natural Language Processing
- Brand Management
- Deep Learning

EXPERIENCE

CYIENT

Hyderabad, Telangana

AI/ML Intern

January 2025 - April 2025

- Address Extraction System: We used KML files exported from Google Earth to define polygon regions on PDF maps. Using geospatial logic and the OpenAI API, we extracted structured address information from those regions with high accuracy.
- Online PDF Search and Highlighter: Built a step-by-step tool to search keywords in PDFs, highlight results, and show occurrences with page numbers. A Tkinter interface was added to redirect users to the exact pages by clicking on the result.
- Function & Variable Extraction from C Files: Developed a Python parser using regex to extract function definitions and variable declarations from C files. After evaluating alternatives like static code analyzers, we chose a regex-based solution for speed, control, and ease of customization.
- Feed Stop Extraction using OCR: Used Tesseract OCR with preprocessing techniques (OpenCV, grayscale, thresholding) to extract "feed stop" sections from complex PDFs. Customized filters and keyword heuristics helped isolate the required data with precision.

ACADEMIC PROJECTS

Smart Mirror | Python, Open CV, Raspberry Pi

- Transformed the traditional mirror by incorporating IoT capabilities and predictive analytics; boosted user interaction by 50% .
- Developed a multifunctional IoT smart mirror capable of real-time date, time, and weather updates, as well as YouTube and Spotify integration; improved user satisfaction ratings by 25% in quarterly surveys.

Fire Extinguishing Robot | Arduino and C

- Fire Detection and Extinguishing Robot .
- Engineered to swiftly identify and respond to fire hazards, this advanced robotic solution combines state-of-the-art sensors for early detection with precision firefighting mechanisms.

Plant Disease Recognition using Deep Learning | Python

- Unveiling a breakthrough in agriculture: Disease detection in rice plants powered by Deep Learning .
- Harnessing the prowess of neural networks, our system identifies subtle signs of diseases through comprehensive image analysis. From leaf discolorations to growth irregularities, no symptom goes unnoticed.

Retinal Disease Detection using FML and XAI with Multi-class Classification | Python

- Developed a multi-class classification model for retinal disease detection using Federated Machine Learning (FML) to ensure privacy and integrated Explainable AI (XAI) for better clinical decision-making.
- Achieved high accuracy and demonstrated potential for early disease detection in resource-limited settings through collaboration with interdisciplinary teams.

PDF to JSON Converter | Python, OpenAI, Data Parsing, JSON, Automation

- Developed a tool to convert PDFs into structured JSON format using OpenAI.
- Automated extraction of key fields like addresses and dates, improving data processing efficiency.

RAG Chatbot | Python, OpenAI, Retrieval-Augmented Generation (RAG), NLP, Data Processing

- Built a chatbot using Retrieval-Augmented Generation (RAG) to provide accurate and context-aware responses.
- Integrated OpenAI for enhanced natural language understanding and dynamic information retrieval.

SKILLS

Languages: Python, Java, C

Frameworks: Django, Node.js

Tools: Git/GitHub

Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability, Communication, Team Work, Time Management, Social Media Presentation, Social Media Marketing, Content Writing, Documentation

EXTRACURRICULAR

KNIT Club

Event Management Lead

2022

VIT-AP

ACM-W

Event Management Member
